

🚀 Approved Startup #1924 • Winner of PAA AI in Business & Industry Award

The Sovereign, Self-Hosted Autonomous AI Workforce for Enterprises & Government

Fathom delivers digital employees deployed inside your private infrastructure. Powered by a high-performance compiled Rust engine and an intuitive desktop chat application, executing end-to-end workflows with full auditability, computer use, and team coordination.

SOVEREIGN DEPLOYMENT

100% On-Premise

Zero vendor data leaks. Runs air-gapped on bare-metal, private cloud, or sovereign state data centers.

RUST CORE SPEED

~0.75 ms Dispatch

15.4 MB memory baseline, sub-millisecond tool routing, and Tokio asynchronous sub-agent swarms.

FATHOM BOT SURFACE

Local-First Chat App

Every contact is an autonomous agent. Multi-agent group chats, routine cron schedules, and computer control.

ENTERPRISE TRUST

Human-in-the-Loop

Signed verification receipts, strict permission cards, and RBAC governance built for regulated sectors.

The Enterprise AI Conundrum: Cloud Leaks vs. Toy Scripts

Companies and governments want autonomous digital workers, but current options fail three critical enterprise requirements.

Data Sovereignty & Security Leaks

Public AI SaaS (OpenAI, Anthropic Cloud, Copilot) force enterprises to stream proprietary banking, customer, and state data to third-party servers. Regulators strictly penalize cross-border data transfers.

82% of enterprises restrict public cloud AI due to compliance risk.

Bloated Python Stacks & Fragile Scripts

Frameworks like LangChain, CrewAI, and AutoGen are written in interpreted Python. They consume 2.5 GB RAM per agent, suffer from GIL bottlenecks, ~400ms latency, and crash during multi-hour background tasks.

Unstable in production; incapable of running 10+ sub-agents reliably.

Uncontrollable Black Boxes Without Approvals

Existing autonomous tools lack granular human governance. They execute unchecked terminal commands, mutate files, and interact with external systems without cryptographic audit trails or interactive approval cards.

Executives refuse full autonomy without deterministic safety rails.

FULL-STACK PLATFORM

High-Speed Rust Runtime + Local-First Team Chat App

Fathom combines an enterprise server engine with an intuitive desktop chat workspace where every colleague is an autonomous specialist.

1. Compiled Rust Multi-Agent Runtime

Tokio asynchronous swarms, sub-millisecond dispatch, 15.4 MB memory baseline, SQLite/PostgreSQL persistence, and long-term semantic memory.

2. Fathom Bot: Collaborative Team Chat

Local-first React 19 + Electron chat client. Talk to agents in 1-on-1s, create multi-bot discussion channels, and schedule autonomous routines via visual cron.

3. Governed Computer Use & Approval Cards

Agents control browser tabs and VM desktops with visual feedback. High-risk actions require explicit human click-to-approve cards before execution.

 **Live Autonomous Execution:** Transparent chain-of-thought streaming, multi-step tool calls, and structured card output.

Built for Enterprise Operators, Not Just AI Researchers

Everything enterprise teams need to configure, delegate, observe, and audit fleets of autonomous digital workers in real time.

OPERATOR PERSONA

Custom Agent Personas & Models

Assign distinct model backends (DeepSeek V3, Claude, Qwen, local Ollama), custom instructions, avatars, and dedicated skillsets per digital employee.

AUTONOMOUS OPERATIONS

Scheduled Routines & Triggers

Configure recurring cron tasks, calendar triggers, and automated morning reports. Agents perform continuous monitoring while the team sleeps.

ENTERPRISE TELEMETRY

Full Observability & Resource Monitor

Live telemetry monitoring CPU, RAM, and token usage. Granular tracing across tool dispatch, LLM calls, and cryptographic audit receipts.

 **Autonomous Market Research:** Deep web exploration across regional venture databases with structured tabular output.

 **Deterministic Execution:** Transparent reasoning trees, isolated tool runs, and verifiable output.

GOVERNED SAFETY RAILS

Autonomous Action with Zero Risk of Hallucinated Damage

Unlike black-box agents that risk damaging production infrastructure, Fathom combines low-level OS virtualization with cryptographically enforced governance policies.

Granular Policy Engine & Tool Scopes

Configurable per-bot permissions. Whitelist or blacklist shell execution, filesystem directories, external networks, and secret vaults.

Signed Verification Receipts

Every tool call outputs a hash-chained verification receipt. Compliance teams can replay any historical execution step-by-step.

Headless & GUI Computer Control

Agents interact seamlessly with web portals, internal ERPs (1C, SAP, amoCRM), and legacy desktop software via automated mouse and keyboard.

Riding the \$165B Enterprise Autonomous Agent Shift

Enterprises are rapidly migrating from passive text chatbots to action-oriented autonomous digital workforces.

\$165B

TAM: GLOBAL ENTERPRISE AI AGENT MARKET (BY 2032)

43.8% CAGR driven by enterprise back-office automation, legal, finance, and industrial workflows.

\$12.4B

SAM: SOVEREIGN ON-PREMISE & REGULATED GOV/B2B

Financial institutions, telecom operators, healthcare, and state ministries requiring sovereign data silos.

\$180M

SOM: CENTRAL ASIA, MENA & EMERGING TECH HUBS

Initial 3-year serviceable market across Uzbekistan, Kazakhstan, UAE, and GCC enterprise digitization programs.

Macro Drivers Accelerating Sovereign Adoption:

1. **Open-Weight Model Revolution:** Open models (DeepSeek, Llama, Qwen) now match closed proprietary APIs, making private on-premise execution superior in cost and control.

2. **Strict Regulatory Mandates:** Personal Data Protection laws (e.g. Uzbekistan Law #547, EU AI Act) mandate that sensitive citizen and corporate records remain on sovereign soil.

43.8%
ANNUAL INDUSTRY CAGR

The Unfair Advantage: Pure Rust Performance & Sovereignty

Comparing Fathom against consumer cloud bots, legacy Python agent frameworks, and enterprise copilots.

DIMENSION	 FATHOM	GROK BOT / GOOGLE SPARK	CREWAI / LANGCHAIN	CLOUD COPILOTS (M365)
Deployment Model	100% Self-Hosted / Sovereign On-Prem	Proprietary Public Cloud	Self-hosted Python Scripts	Multi-tenant SaaS Cloud
Core Engine Technology	Compiled Rust 1.97 (~0.75 ms dispatch)	Proprietary Cloud Python/C++	Interpreted Python (~400ms overhead)	Proprietary Microservices
Memory & Hardware Footprint	15.4 MB RAM (Runs on \$10 VPS or Private Node)	Massive Cloud Server Cluster	1.8 GB – 2.5 GB RAM per agent	N/A (Closed SaaS)
Operator Interface	Fathom Bot (Local-First React 19 + Electron)	Web / Mobile App	Raw CLI / Jupyter Notebooks	Word / Teams Sidebar
Multi-Agent Team Channels	Channels, P2P Delegation & Group Critiques	Single-user Chat Stream	Sequential Linear Hand-offs	Isolated Assistant
Security & Audit Receipts	Signed Verification Receipts + Approval Cards	Opaque Cloud Logging	Unstructured Terminal Logs	Centralized Audit Portal

Dual Revenue Model: Sovereign Enterprise Licenses + Cloud Fleet Seats

High-margin B2B monetization tailored for both mid-market commercial teams and large regulated government deployments.

SAAS TEAM SEATS

Professional Teams

\$49 / seat / month

For tech scale-ups, sales agencies, and engineering teams needing desktop bots with automated routines and search tools.

- ✓ Unlimited Fathom Bot desktop clients
- ✓ Shared multi-bot team channels
- ✓ Cloud computers (50 hrs/month)
- ✓ Standard CRM connectors (amoCRM, Bitrix24)

84%

SOFTWARE GROSS MARGIN

MOST POPULAR

Enterprise Sovereign

\$25k – \$120k / year / node

Annual node license for on-premise private server clusters. Air-gapped banking, industrial, and telecom deployments.

- ✓ 100% On-Premise Air-Gapped server
- ✓ Unlimited internal operator seats
- ✓ Custom hardware acceleration (CUDA/Metal)
- ✓ Dedicated security patching & enterprise SLA

\$4,200

AVERAGE INITIAL B2B ARR

PUBLIC SECTOR

Government & Ministry

Custom RFP (\$150k - \$500k+)

Turnkey digitalization programs for public administration, tax automation, state registry OSINT, and citizen inquiries.

- ✓ National language fine-tuning (Uzbek/Cyrillic)
- ✓ Sovereign state data center deployment
- ✓ OneID & state intranet integrations
- ✓ On-site engineering onboarding

11.8x

PROJECTED LTV / CAC RATIO

From Breakthrough Rust Engine to Enterprise Fleet Scale

Proven technology, approved government startup accreditation, and a clear path to regional leadership.

Q2-Q3 2026 • COMPLETED

Core Engine & MVP

- 13 Rust workspace crates built
- 51 built-in tools + computer control
- Fathom Bot React/Electron client
- **Winner of PAA AI Award (#1924)**
- 42-page technical whitepaper published

Q4 2026 • CURRENT

Commercial Pilots

- 5 enterprise pilots deployed
- amoCRM, Bitrix24 & 1C native sync
- Multi-bot channel collaboration
- Sovereign on-premise bundle
- 500+ active waitlist operators

Q1-Q2 2027 • EXPANSION

Regional Growth

- Scale to 40+ paid B2B clients
- Government ministry pilot in Uzbekistan
- Kazakhstan & UAE partner channels
- \$50k Monthly Recurring Revenue (MRR)
- SOC 2 Type II certification

Q3-Q4 2027 • SCALE

Sovereign Fleet

- Expansion into GCC banking sector
- Fathom Marketplace for custom bots
- Fine-tuned local domain SLMs
- \$180k+ MRR run-rate
- Series A institutional funding (\$5M+)

 **Accredited by StartupBase & IT Park Uzbekistan**

STAGE 3: APPROVED BY COMMITTEE

Deep Technical Expertise in High-Performance Systems & Growth

Founders combining low-level systems engineering, enterprise product execution, and regional B2B growth.

German Yakushev

FOUNDER & CEO • LEAD ARCHITECT

Systems programmer and technology founder. Designed and built Fathom's 13-crate Rust engine, Tokio async multi-agent pipeline, and Fathom Bot messaging architecture. Deep experience in autonomous agent systems and enterprise software architecture.

📍 Tashkent, Uzbekistan • PINFL: 31210968380014

Mirtemir Anorboyev

CO-FOUNDER & PRODUCT MANAGER

Product strategist directing operator user experience, enterprise workflow discovery, and automated templates. Oversees product roadmap alignment between technical architecture and customer requirements across banking, CRM, and corporate back-office workflows.

📍 Tashkent, Uzbekistan • PINFL: 51607005470010

Elbek Yuldashev

CO-FOUNDER & HEAD OF GROWTH

Enterprise sales and growth lead managing commercial pilots, government agency relations, and channel partnerships across Central Asia and the CIS. Spearheads enterprise outbound acquisition, customer success onboarding, and corporate pilot conversions.

📍 Tashkent, Uzbekistan • PINFL: 51204066180078

Seed Round: Scaling Sovereign AI Workforce Across Central Asia & MENA

Accelerating enterprise deployment, government certifications, and regional commercial expansion.

INVESTMENT OPPORTUNITY

\$250,000

SAFE / Convertible Promissory Note

Raising seed capital to reach \$60,000 Monthly Recurring Revenue (MRR), scale to 30 enterprise clients, and complete sovereign state data certifications over an 18-month runway.

VALUATION CAP

\$2.5M - \$3.0M

RUNWAY

18 Months

Use of Funds Allocation

 Systems Engineering & Fine-Tuning (45%)	\$112,500
Senior Rust engineers, local model quantization (vLLM/Ollama), and VM computer control.	
 Enterprise Sales & Government Relations (30%)	\$75,000
B2B enterprise account executives, pilot implementation engineers, and regional summit sponsorships.	
 Security, Certifications & Legal (15%)	\$37,500
State personal data compliance, SOC 2 preparation, penetration testing, and IP filing.	
 Infrastructure & Testing GPU Nodes (10%)	\$25,000
Private GPU cluster for automated agent regression benchmarks and local model evaluation.	

Deploy Autonomous AI Workforce Without Compromising Data Sovereignty

We are ready to demonstrate a live deployment on your private infrastructure in under 15 minutes. Join us in establishing the sovereign AI backbone for businesses and governments.
