

🏆 Winner of PAA AI in Business & Industry Award • Startup ID #1924

The Sovereign, Self-Hosted Autonomous AI Workforce for Enterprises & Government

Fathom delivers digital employees deployed inside your security perimeter. Engineered in ultra-fast Rust with a local-first multi-agent chat client, executing end-to-end workflows with full auditability, computer use, and team coordination.

ENTERPRISE ENGINE

100% On-Premise

Zero vendor data leaks. Runs air-gapped on bare-metal, private cloud or sovereign data centers.

RUST CORE SPEED

~0.75 ms Dispatch

15.4 MB RAM footprint, sub-millisecond tool routing, and Tokio async swarms.

FATHOM BOT SURFACE

Local-First Chat App

Every contact is an autonomous agent. Multi-agent group chats, routine cron schedules, and computer control.

SOVEREIGN COMPLIANCE

AES-256

Human-in-the-Loop

Signed verification receipts, strict permission cards, and RBAC governance built for state agencies.

The Enterprise AI Conundrum: Cloud Leaks vs. Dumb Chatbots

Enterprises and government institutions want autonomous AI workers to eliminate back-office drag, but existing solutions fail three non-negotiable enterprise requirements.

Data Sovereignty & Security Leaks

Public AI SaaS (OpenAI, Anthropic cloud, Copilots) force companies to stream confidential banking, citizen, and IP data to foreign cloud servers. Financial and state regulators strictly prohibit third-party model ingestion.

Result: 82% of enterprises block employee access to cloud AI or risk catastrophic regulatory fines.

Bloated Python Stacks & Single-Turn Limits

Current agent frameworks (CrewAI, LangChain, AutoGen) are glued together in Python. They suffer from 2.5 GB RAM consumption, GIL locks, 400ms tool latency, and break down on multi-hour tasks without persistent state.

Result: "Toy" prototypes that crash in production when coordinating fleets of 10+ sub-agents.

Uncontrollable Black Boxes Without Approvals

Modern autonomous tools lack granular human governance. They perform destructive bash commands, unvetted API calls, or email customers without verifiable proof or cryptographic audit logs.

Result: Executive leadership refuses autonomous deployment without deterministic permission boundaries.

UNIVERSAL AI WORKFORCE

Full-Stack Autonomous Workforce: Rust Server + Fathom Bot

Fathom is an end-to-end sovereign platform that deploys on your own servers and equips your team with an intuitive desktop chat application where every colleague is an autonomous specialist.

1. High-Performance Rust Multi-Agent Runtime

Tokio async swarms, sub-millisecond tool dispatch, 15.4 MB memory baseline, SQLite/Postgres persistence, and long-term vector/entity memory.

2. Fathom Bot: Team Chat Surface with Local-First Contacts

React 19 + Electron chat app. Talk to agents in 1-on-1s, add multiple bots to shared discussion channels, and schedule autonomous routines via visual cron.

3. Governed Computer Use & Interactive Approval Cards

Agents control browser tabs and VM desktops with visual feedback. High-risk actions require explicit human click-to-approve cards before execution.

 **Live Autonomous Execution:** Transparent chain-of-thought streaming, multi-step tool calls, and structured card output.

Built for Enterprise Operators, Not Just AI Researchers

Everything operators need to manage, delegate, observe, and audit fleets of autonomous digital employees in real time.

OPERATOR PERSONA

Custom Agent Personas & Models

Assign distinct LLM backends (DeepSeek V3, Claude 3.7, Qwen 2.5, local Ollama), system prompts, custom avatars, and dedicated skillsets per digital employee.

AUTONOMOUS OPERATIONS

Scheduled Routines & Triggers

Configure cron tasks, webhook event listeners, and daily morning briefings. Agents execute multi-step research while the team sleeps.

ENTERPRISE TELEMETRY

Full Observability & Resource Monitor

Real-time CPU, RAM, and token metrics. Granular tracing across tool dispatch, LLM calls, and cryptographic audit receipts.

Autonomous Market Research: In-depth VC & enterprise discovery across regional databases with structured tabular output.

Deterministic Execution Pipeline: Step-by-step reasoning tree, isolated tool execution, and verifiable output.

PATENTED TRUST LAYER

Autonomous Execution with Zero Risk of Hallucinated Damage

Unlike black-box agents that wreak havoc on production systems, Fathom combines low-level system virtualization with cryptographically enforced governance policies.

Granular Permission Scopes (Policy Engine)

Configurable per-bot tool permissions. Whitelist or blacklist shell execution, filesystem paths, outbound network domains, and sensitive credential vaults.

Signed Verification Receipts

Every tool call outputs a hash-chained verification receipt. Internal audit teams can replay any historical execution step-by-step with full environmental state.

Headless & GUI Computer Control

Agents interact seamlessly with web portals, internal ERPs (1C, SAP, amoCRM), and legacy desktop software via automated mouse, keyboard, and OCR visual feedback.

Fathom Investment Pitch Deck • Security & Governed Computer Use

fathom.uz

Riding the \$165B Enterprise Autonomous Agent Shift

The corporate world is shifting rapidly from passive text chatbots to action-oriented autonomous digital workforces.

\$165B

TAM: GLOBAL ENTERPRISE AI AGENT MARKET (BY 2032)

CAGR of 43.8% driven by back-office automation, legal, finance, and industrial workflows.

\$12.4B

SAM: SOVEREIGN ON-PREMISE & REGULATED GOV/B2B

Financial institutions, telecom operators, healthcare, and state ministries requiring sovereign data silos.

\$180M

SOM: CENTRAL ASIA, MENA & EMERGING TECH HUBS

Initial 3-year serviceable market across Uzbekistan, Kazakhstan, UAE, and GCC enterprise digitization programs.

Why Now? The Perfect Confluence:

1. **Commoditization of Frontier Weights** (DeepSeek V3, Llama 3.3, Qwen 2.5) enables enterprise-grade intelligence locally on commodity GPUs.
2. **Regulatory Clamping** (EU AI Act, Uzbekistan Personal Data Law #547) bans unencrypted cloud processing of state & client records.

43.8%

ANNUAL INDUSTRY CAGR

The Unfair Advantage: Pure Rust Performance & Sovereignty

Comparing Fathom with cloud giants, consumer wrappers, and legacy Python agent frameworks.

DIMENSION	 FATHOM	GROK BOT / GOOGLE SPARK	CREWAI / LANGCHAIN	CLOUD COPILOTS (M365)
Deployment Model	100% Self-Hosted / On-Premise Sovereign	Proprietary Public Cloud Only	Self-hosted Python Scripts	SaaS Cloud Multi-tenant
Core Engine Architecture	Compiled Rust 1.97 (Tokio Async, ~0.75ms dispatch)	Proprietary Cloud Python/C++	Interpreted Python (~400ms overhead)	Proprietary Cloud Microservices
Memory & Server Footprint	15.4 MB Baseline RAM (Runs on \$10 VPS or Server)	Massive Cloud Cluster Required	1.8 GB – 2.5 GB RAM per agent	N/A (Closed SaaS)
Operator Interface	Fathom Bot (Local-First React 19 + Electron)	Web / App Interface	Raw CLI / Jupyter Notebooks	Word / Teams Sidebar
Multi-Agent Group Dynamics	Channels, P2P Delegation & Mutual Critique	Single-user Chat Stream	Sequential Linear Hand-offs	Isolated Single-turn Assistant
Security & Audit Receipts	Signed Verification Receipts + Interactive Approval Cards	Opaque Cloud Telemetry	Unstructured stdout console logs	Centralized Microsoft Audit Logs

Dual Revenue Engine: Sovereign Enterprise Licenses + Cloud Fleet Seats

High gross margin B2B model catering to both mid-market companies and multi-thousand-seat state enterprise deployments.

SAAS & TEAM SEATS

Professional Teams

\$49 / seat / mo

Targeting tech scale-ups, sales agencies, and engineering teams needing desktop bots with automated routines and search tools.

✓ Unlimited Fathom Bot clients

✓ Shared multi-bot channels

✓ Cloud computers (50 hrs/mo)

✓ Standard CRM connectors

MOST POPULAR

Enterprise Sovereign

\$25k – \$120k / yr / node

Annual node license for on-premise private server clusters. Air-gapped banking, industrial, and telecommunications deployments.

✓ 100% On-Premise Air-Gapped

✓ Unlimited internal operator seats

✓ Custom hardware acceleration (CUDA/Metal)

✓ SLA & Dedicated security patching

PUBLIC SECTOR

Government & Ministry

Custom RFP (\$150k – \$500k+)

Turnkey digitalization programs for public administration, tax automation, state registry OSINT, and citizen inquiry handling.

✓ National language fine-tuning (Uzbek/Cyrillic)

✓ Sovereign data center integration

✓ OneID & Gov intranet integrations

✓ On-site engineering team onboarding

From Breakthrough Rust Engine to Enterprise Fleet Scale

Validated technology, approved government startup accreditation, and a clear path to regional market leadership.

COMPLETED (Q2-Q3 2026)

Core Engine & Bot MVP

- 13 Rust workspace crates developed
- 51 built-in tools + computer control
- Fathom Bot React/Electron client launched
- **Winner of PAA AI Award** (Startup #1924)
- 42-page technical whitepaper published

CURRENT (Q4 2026)

Commercial Pilot Deployment

- 5 enterprise pilot deployments underway
- amoCRM, Bitrix24 & 1C native sync
- Multi-bot channel collaboration engine
- Sovereign on-premise installation package
- 500+ active waitlist operators

ROADMAP (Q1-Q2 2027)

Central Asia Enterprise Expansion

- Scale to 40+ paid enterprise clients
- Government ministry pilot in Uzbekistan
- Launch Kazakhstan & UAE partner channels
- \$50k Monthly Recurring Revenue (MRR)
- SOC 2 Type II & ISO 27001 compliance

HORIZON (Q3-Q4 2027)

Global Sovereign Fleet

- Expand to GCC & MENA banking sector
- Fathom Marketplace for third-party bots
- Fine-tuned local domain SLMs on customer data
- \$180k+ MRR run-rate
- Series A institutional round (\$5M+)

STAGE 3: APPROVED

Deep Technical Expertise in High-Performance Systems & Growth

Founders combining low-level systems engineering (Rust/C++), enterprise product execution, and regional B2B growth.

German Yakushev

FOUNDER & CEO • LEAD ARCHITECT

Systems programmer and technology founder. Designed and implemented Fathom's 13-crate Rust engine, Tokio asynchronous agent pipeline, and Fathom Bot local-first messaging architecture. Serial builder with deep experience in autonomous multi-agent systems and enterprise software architecture.

📍 Tashkent, Uzbekistan • PINFL: 31210968380014

Mirtemir Anorboyev

CO-FOUNDER & PRODUCT MANAGER

Product strategist directing operator user experience, enterprise feature discovery, and automated workflow templates. Oversees product roadmap alignment between technical architecture and customer requirements across banking, CRM, and corporate back-office workflows.

📍 Tashkent, Uzbekistan • PINFL: 51607005470010

Elbek Yuldashev

CO-FOUNDER & HEAD OF GROWTH

Enterprise sales and growth lead managing commercial pilots, government agency relations, and channel partnerships across Central Asia and the CIS. Spearheads enterprise outbound acquisition, customer success onboarding, and corporate pilot conversions.

📍 Tashkent, Uzbekistan • PINFL: 51204066180078

Seed Round: Scaling Sovereign AI Workforce Across Central Asia & MENA

Accelerating enterprise deployment, government certifications, and go-to-market scaling.

INVESTMENT OPPORTUNITY

\$250,000

/ SAFE or Convertible Note

Raising pre-seed / seed funding to reach \$60k MRR, onboard 30 enterprise clients, and complete state data sovereignty certifications over an 18-month runway.

VALUATION CAP

\$2.5M – \$3.0M

RUNWAY

18 Months

Use of Funds Breakdown

 Systems Engineering & Fine-Tuning (45%)	\$112,500
Top Rust engineers, local LLM quantization (Ollama/vLLM), and VM computer use virtualization.	
 Enterprise Sales & Government Relations (30%)	\$75,000
B2B enterprise account executives, pilot implementation engineers, and regional summit sponsorships.	
 Security, Certifications & Legal (15%)	\$37,500
State personal data compliance, penetration audits, and corporate IP registration.	
 Infrastructure & Testing Clusters (10%)	\$25,000
Local GPU server clusters for continuous benchmark regression and model evaluation.	

Deploy Autonomous AI Workforce Without Compromising Data Sovereignty

We are ready to demonstrate a live deployment on your own infrastructure in under 15 minutes. Join us as we build the sovereign AI backbone for businesses and governments.
