

The Virtual Employee Subscription Model

Seat-Based Flat Pricing: Eliminating Token Metering and Billing Anxiety

PAGE 06 / 42

Commercial Model: Pay Per Autonomous Coworker Seat

Traditional AI tools force customers to monitor complex token meters, calculate cost-per-call, and live in constant fear of unexpected billing spikes. **Fathom adopts a transparent subscription model:** customers subscribe to dedicated virtual employee seats on a flat monthly basis.

100% UNLIMITED USAGE INCLUDED

- **Unlimited Neural Compute:** Run millions of tokens monthly without extra surcharges or rate-limit penalties.
- **Unlimited Tool Invocations:** Web search, browser automation, email validation, and code execution.
- **Unlimited Job Schedules:** Set up continuous hourly or daily recurring background workflows.

ENTERPRISE BUDGET PREDICTABILITY

- **Fixed OpEx:** Treat AI workers as standard fixed-cost software seats rather than volatile utility bills.
- **Elastic Expansion:** Add 5 SDRs during a sales sprint and scale back down instantly without severance costs.
- **No Micro-Management:** Teams don't need to restrict AI usage to save token budget.

Subscription Tier Architecture Overview

SUBSCRIPTION TIER	INTENDED SCALE	INCLUDED CAPABILITIES & FLEET FEATURES
Starter Seat	1 Dedicated Autonomous Worker	Full OSINT tools, 7 search backends, contact verification, and Telegram notifications.
Growth Pod	3 – 5 Collaborative Coworkers	Multi-agent tree coordination, CRM auto-push, Docker computer sandboxing, and persistent memory.
Enterprise Fleet	10+ Autonomous Workers	Custom coworker prompts, dedicated PostgreSQL cluster, role-based access control, and SLA support.

ZERO TOKEN ANXIETY: WHY METERED BILLING KILLS AI ADOPTION

When employees know every prompt or search costs \$0.05, they self-censor and avoid deep multi-step research. By including unlimited neural compute in the seat subscription, Fathom empowers agents to perform exhaustive 10-step verifications without financial friction.

The Core Promise: You pay for the worker's output and business role, not the number of words it reads or writes.
