

# The Self-Replicating Growth Loop

How Fathom Sells Fathom: Autonomous Customer Acquisition at Zero Marginal CAC

## The Ultimate Organic Growth Mechanism: Autonomous Self-Outreach

The most powerful marketing validation of an autonomous sales agent is when **the product sells itself**. Fathom operates an internal fleet of autonomous SDR coworkers whose sole job is to discover target B2B companies, verify decision-maker contacts, and conduct personalized cold outreach to sign up new customers at near-zero customer acquisition cost (CAC).

## The 4-Step Self-Replicating Acquisition Engine

### ZERO MARGINAL CAC ECONOMICS

- **No Human BDR Salaries:** 50 virtual SDRs execute 5,000 personalized touchpoints daily at near-zero incremental server cost.
- **Hyper-Personalized Proof-of-Work:** Instead of generic cold spam, outreach includes real, verified prospect data tailored to the recipient's exact ICP.
- **Instant Value Delivery:** Prospects experience the product's output before ever entering a sales demo.

### THE VIRAL INBOUND REFERRAL LOOP

Every email sent by a Fathom SDR includes a subtle footer: *"This prospect list was researched, verified, and sent autonomously by Fathom AI Coworker."* Recipients frequently reply asking how to hire a similar digital worker for their own company.

### THE FLYWHEEL COMPOUNDING EQUATION

As new customers subscribe, a fraction of their subscription revenue funds additional worker compute instances, which in turn discover more prospects and close more subscriptions. This creates an infinite, self-funding acquisition loop.

**Infinite Self-Funding Flywheel:** As more customers subscribe, compute revenue funds more autonomous worker nodes, scaling top-of-funnel outreach without outside marketing spend.
