

Executive Headhunter & Talent Scout

Autonomous Technical Sourcing, Candidate Mapping & Profile Corroboration

PAGE 17 / 42

Scenario Brief: Sourcing Hard-to-Find Senior Rust & AI Systems Architects

Agency: Apex Tech Search.

Objective: Map and source 30 senior systems engineers with deep Rust and distributed systems experience for an autonomous robotics venture.

Talent

AST PARSER: TOKIO/AXUM

Alexander Vance · Principal Systems Engineer

Current: Senior Rust Eng at CloudScale (4.2 yrs) · Berlin, Germany

Top 1% Contributor: tokio-rs/tokio (142 commits) · SIMD AVX-512 optimization

✓ WORK EMAIL VERIFIED

Icebreaker generated from EuroRust 2025 talk

AUTONOMOUS SOURCING WORKFLOW

- GitHub Repository Mining:** Scans contributors to top-tier open-source Rust projects (e.g. Tokio, Axum, Polars) via `code_symbols`.
- Social & Resume Cross-Referencing:** Cross-checks GitHub handles against LinkedIn and Telegram to verify current employer, seniority, and tenure.
- Deliverability Check:** Verifies public work emails via SMTP handshakes.
- Candidate Dossier Compilation:** Produces clean Markdown dossiers with project history and highlighted repository contributions.

WHY AUTONOMOUS SOURCING OUTPERFORMS HUMANS

- Code-Level Understanding:** Evaluates actual GitHub commit quality and technical complexity, not just keyword-stuffed LinkedIn resumes.
- Unbiased Discovery:** Finds high-caliber engineers who don't maintain active LinkedIn profiles but actively commit code.
- Instant Reachout Readiness:** Outlines personalized icebreakers based on the candidate's real recent open-source work.

Key Takeaway: Sourcing moves from a slow, manual LinkedIn grind to an automated, code-aware intelligence gathering pipeline.
