

Screen Streaming & Seamless Takeover

Real-Time Browser Feeds and Operator Interventions for CAPTCHAs and 2FA

Governed Operator Collaboration: The Human Takeover Lease

When autonomous workers encounter high-security barriers—such as multi-factor authentication (2FA SMS), bank logins, or complex CAPTCHA puzzles—Fathom pauses gracefully and invites the human operator to assist.

1. LOW-LATENCY STREAM (/SCREEN)

The active browser viewport is streamed in real time over a WebSocket feed (500ms intervals) directly into the desktop app.

2. EXCLUSIVE LEASE (/CONTROL/WS)

Clicking "Take Control" grants exclusive mouse/keyboard access; bot actions are paused safely to prevent race conditions.

The Hybrid Ideal: 99% autonomous heavy lifting paired with instant 1% human oversight at critical security checkpoints.
