

How Coworkers Remember Across Months

Long-Term Semantic Memory: Zero SaaS Cost, Local SQLite & True Institutional Knowledge

Persistent Institutional Intelligence vs. Stateless AI

Human employees become more valuable over time because they accumulate institutional knowledge. Fathom equips digital workers with a persistent **Semantic Memory Engine** that compounds intelligence across months.

STATELESS AI ASSISTANTS (NO MEMORY)

- **Forget Everything:** Every new session starts from scratch; context is lost upon closing tab.
- **Repetitive Prompts:** Users must re-explain company guidelines and past decisions daily.
- **Expensive Cloud Vector DBs:** Hosted vector databases cost thousands in recurring fees.

FATHOM DIGITAL EMPLOYEES (PERSISTENT MEMORY)

- **Permanent Retention:** Discovered contacts and company facts persist in SQLite.
- **Sub-5ms Memory Digest:** Relevant past facts are injected at session start automatically.
- **Zero External Cloud Costs:** Operates entirely in-process with SQLite FTS5 (BM25) and TF-IDF.

Memory Growth Over Time

Day 1	Initial Briefing Ingestion Coworker absorbs target market parameters and guidelines.
Day 30	Entity Graph Compounding Graph holds 2,500+ verified executive relationships and tech tags.
Day 90	Full Institutional Fluency Detects executive job changes automatically: <i>"John moved to Globex; updating CRM."</i>

Compounding Asset: Your digital workforce becomes smarter, faster, and more tailored to your business every single day.
