

Strategic Product Roadmap (2026–2027)

Next-Generation Multi-Modal Vision, Decentralized Meshes & Autonomous Voice

PAGE 41 / 42

The Future of Autonomous Work: Evolutionary Milestones

Fathom is built on an extensible foundation designed to expand from text and browser automation into full multi-modal vision grounding, decentralized peer-to-peer swarms, and voice outreach.

Q4 2026 Vision-Native Hybrid Browser Engine

Fusing accessibility trees with real-time multi-modal vision grounding (Qwen-VL-Max) to navigate complex canvas elements, charts, and interactive web maps.

Q1 2027 Decentralized Multi-Company Coworker Mesh

Enabling autonomous coworkers from different corporate tenants to securely negotiate, share verified data, and trade services using cryptographic tokens.

Q2 2027 Autonomous Voice & Cold Calling Agents

Integrating sub-300ms ultra-low-latency neural voice synthesis for phone verification, switchboard navigation, and automated qualification calls.

Q3 2027 Self-Evolving Skill Generation

Agents automatically record human operator demonstration sessions in the browser, compiling them into reusable, deterministic Rust tools.

CONTINUOUS RESEARCH & SYSTEMS INNOVATION

Our engineering roadmap focuses on driving down tool overhead, expanding verified enterprise integrations, and pioneering sovereign on-premise AI deployments.

Continuous Innovation: Every milestone strengthens the enterprise moat and expands the operational scope of digital coworkers.
