

The Virtual Employee Subscription Model

Seat-Based Flat Pricing: Eliminating Token Metering and Billing Anxiety

Commercial Model: Pay Per Autonomous Coworker Seat

Traditional AI tools force customers to monitor complex token meters, calculate cost-per-call, and live in constant fear of unexpected billing spikes. **Fathom adopts a transparent subscription model:** customers subscribe to dedicated virtual employee seats on a flat monthly basis.

100% Unlimited Usage Included

- **Unlimited Neural Compute:** Run tens of millions of tokens monthly without extra surcharges or throttling.
- **Unlimited Tool Invocations:** Web search, browser automation, email validation, and code execution.
- **Unlimited Job Schedules:** Set up continuous hourly or daily recurring background workflows.

Enterprise Budget Predictability

- **Fixed OpEx:** Treat AI workers as standard fixed-cost software seats rather than volatile utility bills.
- **Elastic Expansion:** Add 5 SDRs during a sales sprint and scale back down instantly without severance costs.
- **No Micro-Management:** Teams don't need to restrict AI usage to save token budget.

Subscription Tier Architecture Overview

Subscription Tier	Target Organization	Dedicated Capacity	Included Capabilities & Fleet Features	SLA & Support
Starter Seat	Solo Founders, SMBs	1 Dedicated Worker	Full OSINT tools, 7 search engines, contact verification, Telegram bot notifications.	Community / Standard
Growth Pod	Scaleups, Agencies	3 – 5 Coworkers	Multi-agent tree coordination, CRM auto-sync, Playwright sandboxing, persistent memory.	Priority 8h Response
Enterprise Fleet	Mid-Market, Enterprises	10+ Dedicated Workers	Custom coworker prompts, dedicated PostgreSQL cluster, role-based RBAC, private VPC.	24/7 Dedicated Slack SLA

The Commercial Commitment: You pay for the digital worker's business output and role, never for the number of words it reads, reasons over, or writes.
