

 Approved Startup #1924 • Winner of PAA AI in Business & Industry Award

Autonomous AI Workforce Platform

Train Once in Chat. Operates Autonomously 24/7.

Fathom delivers digital employees powered by top-tier cloud models and a high-performance compiled Rust engine. You train your digital worker naturally in chat — and it continuously executes end-to-end operational workflows 100% autonomously without human intervention.

CLOUD-NATIVE AUTONOMY

100% Autonomous

Zero manual supervision needed. Once trained, bots execute complex recurring workflows completely without human intervention.

RUST CORE SPEED

~0.75 ms Dispatch

15.4 MB memory baseline, sub-millisecond tool routing, and Tokio asynchronous multi-agent orchestration.

UNIVERSAL AI HUB

Best Industry Models

Seamlessly aggregates state-of-the-art AI solutions into one universal interface with persistent state, scheduled cron routines, and computer control.

NATURAL CHAT TRAINING

Conversational Setup

Onboard bots naturally via /setup. The agent learns your company procedures and converts them into standing SOUL.md operational rules.

AUTONOMOUS BOT ARCHITECTURE

Inside Fathom Bot: Persistent Digital Coworker State Machine

Beyond simple chat windows: each Bot is a persistent, stateful employee with isolated CWD directories, AppArmor sandboxing, and dynamic SOUL.md execution rules.

1. Persistent State Machine

Unique identity, voice persona, isolated `bot-cwd` working folder, and 24KB standing instructions via `SOUL.md` with dynamic context interpolation.

2. Hardened AppArmor Sandbox

Web browsing runs in a dedicated `openmausbot-browser` AppArmor profile with cgroups resource caps (2GB RAM, 2 CPUs, 512 PIDs fork-bomb guard).

3. Cryptographic Drift Guard

SHA-256 integrity checks between disk files and system state. External modifications trigger visual diff alerts with human verification before execution.

THREAD-AWARE MULTI-AGENT SWARMS

Thread-Aware Concurrency & Autonomous Swarm Delegation

A single bot handles up to 10 concurrent tasks via FIFO queueing, or acts as Section Chief orchestrating teams of specialist bots via MCP thread tools without user UI disruption.

1-10 Parallel Tasks / Bot

Independent execution slots (`TaskRecord`) with visible queue indicators so incoming requests never block running workflows.

Autonomous Thread Creation

Bots spawn child worker threads via `start_thread` (with `activate: false`), delegating subtasks with depth-1 runaway loop guards.

Prompt Cache Optimization

Stable identity hashing keeps LLM context cache alive across delegations, cutting token latency by 70% and provider costs by up to 90%.

MARKET VALIDATION

IDC & Gartner: The Multi-Trillion Dollar Shift to Agentic Workforces

Enterprise software is undergoing an irreversible transition from human-operated SaaS tools to fully autonomous digital coworkers executing operational tasks.

\$1.3T+
Agentic AI Market by 2029

IDC forecasts agentic AI spending will exceed \$1.3 Trillion by 2029, representing over 26% of all global enterprise IT investments.

40%
Enterprise Apps with Agents by 2026

Gartner predicts that within 24 months, 40% of all enterprise applications will have embedded autonomous agents, up from under 5% in 2023.

10x
Workforce Throughput Multiplier

Enterprises deploying compiled autonomous workers report 10x higher operational bandwidth with zero increase in administrative overhead.

MARKET INTELLIGENCE IN ACTION

Autonomous OSINT: Web Crawling & Tabular Deliverables

Real execution example: Fathom autonomously mapping regional venture capital funds, extracting contacts, and compiling structured tabular summaries.

Fathom Investment Pitch Deck • Autonomous Market Intelligence

fathom.uz

PROACTIVE WORKFLOWS

24/7 Scheduled Automations & Visual Calendar Triggers

Digital employees execute continuous routines while human teams sleep: competitor price tracking, daily morning summaries, and recurring system audits.

TOP-TIER CLOUD INTELLIGENCE

Best-in-Class Foundation Models & Universal Cloud Orchestration

Fathom connects directly to the latest state-of-the-art frontier models (Claude 3.7 Sonnet, OpenAI o3/GPT-4o, DeepSeek V3/R1, Qwen 2.5 Max) inside high-performance cloud infrastructure.

UNIVERSAL MODEL ROUTER

Frontier Model Intelligence

Automatic intelligent routing directs reasoning, deep research, and coding tasks to the highest-performing frontier models in real-time, ensuring maximum accuracy and complex task success.

ZERO-INTERVENTION CLOUD EXECUTION

Continuous 24/7 Autonomy

Bots run continuously in managed cloud sandboxes without human supervision. Teach the bot your standard operating procedures in chat once — it executes background routines around the clock.

HOST TELEMETRY & HARDWARE CONTROL

Live Hardware Diagnostics & Enterprise Observability

Real-time resource utilization tracking: CPU, memory, token throughput, and container states with proactive anomaly detection and autonomous self-healing.

The Inflection Point: From Conversational Chat to Agentic AI

Global analyst consensus confirms that enterprise spending is decisively moving away from passive chatbots toward autonomous, task-executing agent swarms.

\$1.3T+

IDC: AGENTIC AI SPENDING BY 2029

IDC projects Agentic AI will exceed 26% of all worldwide enterprise IT spending within 5 years, marking the industry's next generational compute transition.

40%

GARTNER: ENTERPRISE APPS WITH AGENTS

Gartner forecasts 40% of all enterprise applications will embed task-specific autonomous AI agents, jumping from under 5% in early 2025.

\$5.95T

GARTNER: GLOBAL AI SPENDING BY 2030

Total enterprise AI investment surging to nearly \$6T as traditional human knowledge workflows transition to persistent digital workers.

Analyst Takeaway: The "Toy Chatbot" Era Has Ended

Enterprise buyers no longer allocate budget for novelty chat windows that output text advice. They demand autonomous digital agents that execute complete multi-step tasks inside their existing CRM, ERP, and database perimeter.

GARTNER & IDC CONSENSUS

The New Economics of Labor: McKinsey Agentic Advantage & ROI

Deploying autonomous autonomous workers shifts enterprise cost structures from linear human payroll to sub-dollar compute execution, unlocking unprecedented operating margins.

MGI RESEARCH

60%–70% Work Automation

McKinsey Global Institute calculates that current generative and agentic AI capabilities can automate corporate work activities absorbing 60% to 70% of employee time today.

COST DEFLATION

92% Cost Reduction per Task

A junior analyst task costing \$35/hr in human labor (research, CRM data entry, outreach drafting) executes on Fathom in ~40 seconds for less than \$0.08 in local server compute.

ORGANIZATIONAL VELOCITY

10× Execution Throughput

Digital coworkers operate 24/7 without context switching or fatigue. Back-office queues in banking, tax auditing, and vendor vetting shrink from weeks to minutes.

TRADITIONAL HUMAN BPO / QA

\$2,400 – \$4,500 / mo

40 hrs/wk, onboarding ramp-up 60 days, error rate 4.2%, non-working nights/weekends.

FATHOM AUTONOMOUS BOT WORKER

\$200 – \$500 / mo

168 hrs/wk (24/7), instant self-setup via /setup, deterministic audit logs, zero data leakage.

NET ECONOMIC PAYBACK

8.4× – 12× ROI

Break-even achieved in under 3 weeks of enterprise deployment with full on-premise governance.

Enterprise Invariant: Autonomous Security Unlocks Deployment

Enterprises cannot realize these 90%+ productivity gains if using cloud tools that violate state data regulations. Fathom's 100% on-premise Rust engine delivers full agentic labor economics inside corporate firewalls.

MCKINSEY RESEARCH BACKED

Addressable Market: Global \$165B Wave with Autonomous Focus

Massive global tailwinds paired with an immediate, high-margin niche in autonomous state institutions and regulated enterprise clusters.

\$165B

TAM: GLOBAL ENTERPRISE AI AGENT MARKET (BY 2032)

43.8% CAGR driven by enterprise back-office automation, legal, finance, and industrial workflows.

\$12.4B

SAM: AUTONOMOUS ON-PREMISE & REGULATED GOV/B2B

Financial institutions, telecom operators, healthcare, and state ministries requiring enterprise workflow automation.

\$180M

SOM: CENTRAL ASIA, MENA & EMERGING TECH HUBS

Initial 3-year serviceable market across Uzbekistan, Kazakhstan, UAE, and GCC enterprise digitization programs.

Macro Drivers Accelerating Autonomous Adoption:

- 1. Open-Weight Model Revolution:** Open models now match closed proprietary APIs, making private on-premise execution superior in cost, latency, and data control.
- 2. Strict Regulatory Mandates:** Personal Data Protection laws (e.g. Uzbekistan Law #547, EU AI Act) mandate that sensitive citizen and corporate records remain strictly on autonomous soil.

43.8%

ANNUAL INDUSTRY CAGR

Train Once in Chat: Full Lifecycle Autonomous Operations

Traditional RPA and automation tools require rigid Python scripting and brittle integrations. Fathom replaces complex code with conversational natural training.

STEP 1: CHAT TRAINING

Conversational Onboarding

The manager interacts with the bot in plain natural language via `/setup`, explaining duties, corporate guidelines, APIs, and business edge cases.

STEP 2: RULE COMPILATION

Persistent SOUL.md & Skills

Fathom automatically synthesizes the training session into standing operational instructions (`SOUL.md`) and portable action skills committed with user review.

STEP 3: 24/7 AUTONOMY

Zero-Touch Execution

The trained bot runs completely without human supervision: managing inboxes, reconciling invoices, running CRM syncs, and orchestrating multi-agent subtasks on schedule.

Enterprise Advantage: Universal Intelligence Powered by Top Cloud Models

- **Seamless Cloud Orchestration:** Operates 100% in high-availability cloud infrastructure with zero local server maintenance.
- **State-of-the-Art Frontier Models:** Leverages the latest reasoning and coding capabilities (Claude 3.7, OpenAI o3, DeepSeek R1) for flawless execution.

Why Fathom Wins: Compiled Rust Performance & Autonomousty

How Fathom fundamentally outperforms public cloud bots, legacy Python agent frameworks, and enterprise copilots.

Transparent B2B Monetization with Unlimited AI Tokens

Simple, predictable pricing: personal desktop operators and custom enterprise deployments with zero per-token anxiety.

INDIVIDUAL OPERATORS

Personal Operator

\$79 / month

 **Unlimited AI Tokens Included**

- ✓ Full Fathom Bot desktop application (macOS, Windows, Linux)
- ✓ Unlimited custom agent personas & behavioral tuning
- ✓ Autonomous routines & background calendar scheduler
- ✓ Deep web research agent & OSINT tools
- ✓ Standard CRM connectors (amoCRM, Bitrix24)
- ✓ Community support & continuous updates

ENTERPRISE & GOV SOVEREIGN

Enterprise Autonomous

Custom (\$200 – \$500 / mo / node)

- 63 built-in tools + computer control (up to 75)

 **Unlimited AI Tokens • 100% Autonomous Execution Air-Gapped**

- ✓ 100% Autonomous Execution deployment inside private infrastructure
- ✓ Unlimited internal operator seats across the organization
- ✓ Multi-bot shared team channels with peer review delegation
- ✓ Governed computer use with interactive permission cards
- ✓ Custom ERP & intranet integration (1C, SAP, private SQL)
- ✓ Hardware acceleration support (CUDA / Apple Metal)
- ✓ Enterprise SLA, dedicated security patching & onboarding

PROJECTED LTV / CAC RATIO

From Breakthrough Rust Engine to Enterprise Fleet Scale

Proven technology, approved government startup accreditation, and a clear path to regional leadership.

Q2-Q3 2026 • COMPLETED

Core Engine & MVP

- 13 Rust workspace crates built
- 51 built-in tools + computer control
- Fathom Bot React/Electron client
- **Winner of PAA AI Award (#1924)**
- 42-page technical whitepaper published

Q4 2026 • CURRENT

Commercial Pilots

- 5 enterprise pilots deployed
- amoCRM, Bitrix24 & 1C native sync
- Multi-bot channel collaboration
- Autonomous on-premise bundle
- 500+ active waitlist operators

Q1-Q2 2027 • EXPANSION

Regional Growth

- Scale to 40+ paid B2B clients
- Government ministry pilot in Uzbekistan
- Kazakhstan & UAE partner channels
- Expanding recurring revenue fleet
- SOC 2 Type II certification

Q3-Q4 2027 • SCALE

Enterprise AI Fleet

- Expansion into GCC banking sector
- Fathom Marketplace for custom bots
- Fine-tuned local domain SLMs
- Scaled enterprise node fleet
- Institutional funding expansion

STAGE 3: APPROVED BY COMMITTEE

Deep Technical Expertise in High-Performance Systems & Growth

Founders combining low-level systems engineering, enterprise product execution, and regional B2B growth.

FOUNDER & CEO

German Yakushev
Lead Systems Architect

Systems engineer & founder. Architected Fathom's 13-crate Rust engine, Tokio async multi-agent pipeline, and autonomous Bot state machine.

Tashkent PINFL: 31210968380014

CO-FOUNDER & PRODUCT

Mirtemir Anorboyev
Product & Workflow Lead

Product strategist directing operator UX, enterprise workflow discovery, and CRM/ERP template pipelines across banking and corporate back-office.

Tashkent PINFL: 51607005470010

CO-FOUNDER & GROWTH

Elbek Yuldashev
Enterprise Growth & GovRel

B2B growth lead managing enterprise pilots, government relations, and regional channel partnerships across Central Asia and the CIS.

Tashkent PINFL: 51204066180078

AI SPECIALIST

Sanjar Shukurov
ML & Agent Alignment

Specialist in LLM agent alignment, domain model fine-tuning, RAG semantic architectures, and high-load inference on local autonomous GPU clusters.

Tashkent +998 93 346 16 38

Scaling the Autonomous AI Workforce Across Central Asia & MENA

Partnering with visionary investors to accelerate enterprise deployments, state certifications, and commercial fleet scaling.

INVESTMENT PROPOSITION

Seed Capital for Strategic Scaling

We are opening an early-stage investment round for strategic partners to accelerate commercial enterprise pilots, establish autonomous government installations, and expand engineering capacity over an 18-month growth runway.

- ✓ **Instrument:** Standard SAFE / Convertible Promissory Note
- ✓ **Runway:** 18 Months of aggressive product & sales acceleration
- ✓ **Key Milestone:** 30+ Enterprise Enterprise AI Nodes deployed

STRATEGIC MILESTONE TARGET

Expansion across Banking, Government & Telecommunications

Use of Capital Allocation

Systems Engineering & Fine-Tuning 45%

Senior Rust engineers, local model quantization (vLLM/Ollama), and VM computer control virtualization.

Enterprise Sales & Government Relations 30%

B2B enterprise account executives, pilot implementation engineers, and regional summit sponsorships.

Security, Certifications & Legal 15%

State personal data compliance, SOC 2 preparation, penetration testing, and corporate IP registration.

Infrastructure & Testing GPU Nodes 10%

Private GPU cluster for automated agent regression benchmarks and local model evaluation.

Deploy Autonomous AI Workforce Without Compromising Autonomous Efficiency

We are ready to demonstrate a live deployment on your private infrastructure in under 15 minutes. Join us in establishing the autonomous AI backbone for businesses and governments.
